Professional Summary

Computer Science Engineering student specializing in Artificial Intelligence and Machine Learning with hands-on experience in machine learning, computer vision, NLP, and full-stack development. Passionate about building scalable AI systems, solving real-world problems, and deploying production-ready applications. Strong foundation in data structures, algorithms, and applied research.

Technical Skills

- **Programming:** Python, C++, JavaScript
- **AI/ML:** Machine Learning, Deep Learning, Computer Vision, NLP, TensorFlow, PyTorch, Scikit-learn, OpenCV
- **Backend:** FastAPI, Flask, REST APIs
- **Frontend:** HTML, CSS, TailwindCSS, Bootstrap
- **Databases:** MongoDB, MySQL, PostgreSQL, Firebase
- **Tools:** Git, Docker, Linux, CI/CD, VS Code

Experience

Technical Team Lead Mini Projects & Hackathons

2024 – Present

- Led multiple mini-project teams and served as team lead in various national-level hackathons and technical competitions.
- Managed project planning, task distribution, development, testing, and final deployment of solutions.
- Actively contributed to the development of multiple AI, ML, and full-stack projects across diverse domains.
- Collaborated with cross-functional team members to deliver high-quality, scalable, and efficient solutions.

Projects

Real-Eye Deepfake Detection Platform

Computer Vision, Deep Learning

Developed a deep learning-based system using TensorFlow and OpenCV to detect manipulated videos. Designed REST APIs for real-time inference, optimized model performance, and improved detection accuracy on benchmark datasets.

AI Website Builder Automated Website Generation Platform

Generative AI, Full Stack

Built an AI-powered platform that automatically generates complete responsive websites from simple user prompts using LLMs. Implemented backend APIs, dynamic UI rendering, and deployment pipelines for real-time website generation.

Smart PDF Search Engine AI Document Query System

NLP, Information Retrieval

Developed an intelligent PDF search engine that indexes documents using hybrid search (TF-IDF, BM25, and semantic embeddings) to provide accurate answers with citations. Built an end-to-end pipeline for document ingestion, indexing, semantic retrieval, and AI-powered response generation.

Achievements

- Top 10 Finalist Kalp-AI-thon 2025
- Winner Bluetooth Controlled Robot Competition
- Top 10 Team Smart India Hackathon (Internal Round)
- Runner-up Starlink Innovation Challenge
